1 Before installation

Check if all parts are included.

Check the installing location

Before attaching the unit, check and confirm the measurement of installing location.

1. Check if there is no obstacle on the frame or at the floor and if there is more than 37mm space for the installation.
2. No obstacle interferes with the insect screen installed.
3. All 4 frames are right-angled at the opening.

Clean all four sides and corners before installing the unit

Caution

Always wear working gloves during installation.

You may have a puncture wounds and cuts from aluminum profile edge without gloves.

2 Top Rail

1. Provisionally stick the double-sided tape on top of Top rail and peel off the white tape. Check if Top rail caps are deeply inserted and stick Top rail on the ceiling provisionally so that the space on the left and right side is equal.
2. Fix the Top Rail with the tapping screw. Do not tighten the screw too much as it may damage the frame to bend. Slide the Top Rail Cap outwards so it touches the window frame.

Caution

Do not drop any hand tools or insect screen components.

Pay close attention not to drop the hand tools and insect screen components during installation. It may cause serious injury especially when working on high places.

3 Bottom Rail

1. Fix Bottom rail in line with Top rail as shown in the left figure.
2. Fix it with tapping screws.
3. Push Bottom rail caps onto the frames on both sides till no space is found.

4 -A Single Door

1. Choose the side you want your screens to retract.
2. Tilt the unit and insert the screen unit between Top Rail and Bottom Rail. There is no upside down for this screen unit, however, "Inside Sticker" should face inside the room for further installation.
3. Temporarily tape the retracting side as shown.
4. Fix the Stop Post with screws.
5. Remove the tape on retracting side and fix the unit with the Tapping screws. While fixing the unit, make sure not to loosen the wire adjusting screws.
6. Once installation is completed, you can peel off this sticker.

4 -B Double Door

1. Tilt in the unit with "Inside Sticker" facing the room.
2. Tape the unit as shown. Make sure that wires are not tangled and fix the Stile Post with the Tapping screws. Again, do not loosen the wire adjusting screw.

3. Place the wire stopper from above the wire at the center of bottom rail.
4. Peel off the "Inside Sticker".

After installation

Check the screen unit is fixed properly to the frame by moving the Stile Post back and forth.

5 Inspection after installation

Check the movement of the product after installation.

1. Confirm the movement by opening and closing the screen several times.
2. Confirm the Top and Bottom Rail are installed correctly.
3. Confirm if there are no damage to the aluminum profiles.
4. Confirm if there are any gap between sliding bar and stop post when closed.

Adjusting Procedure

Stiff Screen Door

Follow the steps to solve the problem.

1. Top Rail and Bottom Rail are not aligned center and not paralleled.
 - Remove the unit and reinstall it again.
2. Remove dirt, dust and debris on Bottom Rail.
 - Clean and remove anything that is in the way of movement.

Adjust the wire tension

Check the tension of wire by using a screw driver. You will need to adjust the wire when you find it too loose or tight. Adjustment should be done when screens are closed and stretched.

Wire Adjustment Screw

Loosen the wire adjustment screw to adjust the tension. Wire will be tighten if you move the screw away from the closest wire. All wires should have same wire tensions.

NOTICE

Please handle it with care for the wire adjustment.

Screw nut may fall off if you loosen the wire adjustment screw more than 2 turns which may cause the product malfunction. Wire adjusting process is a very difficult process and we do not recommend when it is not necessary. Please keep in mind that malfunction caused by screw nut fall is out of warranty.
